Water and transportation costs

Given two types of countries: water-rich and data/tech-rich, but where transport costs of water are high and transport costs of data/tech are low...

Water as a proxy for gravity since it is heavy

Negotiation when agents believe they have the right

In a market place of free ideas and money with entrenched interests, do we necessarily reach efficiency?

Does open science engender trust in results?

Water markets when some firms return water to the common pool

Efficient resource allocation when users are anonymous
