Research Plan

Nicholas A Potter

2017-09-28

My research interests are motivated by a few underlying interests: scarcity and it's impacts, the importance of causal inference in research generally, but especially in providing actual information about complex systems like economics, technology and the implications of ubiquitous data, development economics, and collaborative communities like open source and reproducible research efforts.

Statistical Validity, Reproducible Resaerch

Competition

Econometric Theory and Machine Learning

Economics of Water and Other Scarcities

Collaborative Economies
